

AVOID COSTLY AND RISKY COSMETIC SURGERIES

No needles, no surgery
JUST RESULTS

This new revolutionary treatment is a non-surgical lift, is highly effective and is a remarkable alternative to surgery. Effects are noticeable straight away.

Full results become visible after 4-6 weeks. It is virtually painless and doesn't require general anaesthesia.

Plasma skin tightening is a relatively new innovation in the beauty industry but has been used for a number of years in North America and Europe.

The extremely accurate device works by utilising the voltage in the air between its tip and the skin to form a plasma charge. An electrical arc is created and instantly shrinks the targeted skin. The tissue retraction and tightening gives results that are comparable to invasive surgery.

Benefits of Plasmalift Pro PURISMA

- Reduce heavy brows / saggy skin around the eyes
- Treats wrinkles around the eye
- Very low risk procedure with long lasting results
- Quick procedure time
- No injectable anaesthetic required
- No cutting and no thinning of the skin
- No stitches required
- Minimal side effects and far less downtime than surgery
- Significantly cheaper than surgery

PURISMA

PLASMALIFT PRO

ANTI-AGEING, COSMETIC SKIN
TIGHTENING & REJUVENATION

INSTANT & AMAZING
RESULTS

MINIMAL DOWNTIME

NO SURGERY

Instant and amazing results

Plasmalift Pro PURISMA skin tightening is the only cosmetic treatment to use plasma to eliminate excess skin. Low risk, minimal downtime and more affordable than surgery.

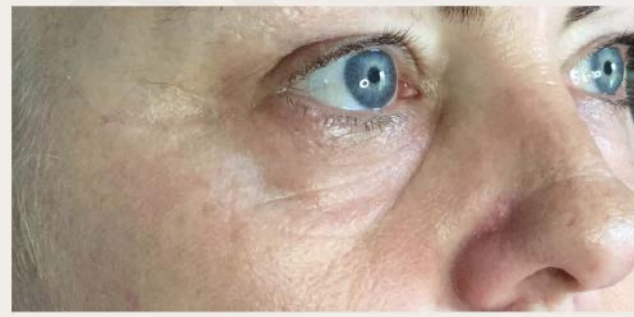

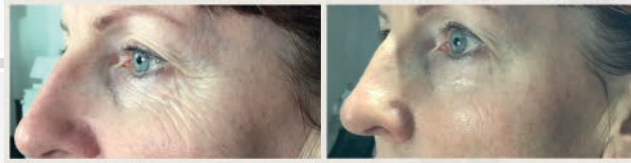

Plasmalift Pro PURISMA multi modality system is indicated for:

Scar reduction, skin tightening and lifting, fine line reduction, stretch mark reduction, skin lifting, acne treatment, eyelid lifting, skin toning, skin sterilisation, reduction of pores and regeneration, acne reduction by skin surface sterilisation, general skin tone up by emitting high plasma energy over a wide range of the skin. TGA approved ARTG 339842.

How Plasmalift Pro PURISMA differs from surgery

- No general anaesthetic required
- No needles required
- No scalpels or cutting of the skin
- No stitches required
- Minimal downtime
- No thinning of the skin
- Quick and easy procedure
- Significant cost savings

Treatment Before and After

How long does the treatment take?

We allow 60 minutes including time for the anaesthetic to work and consent forms to be completed.

How many treatments will I need?

One treatment is often enough depending on skin type, severity of wrinkles and client expectation. For some a second or third treatment may be required to achieve the desired outcome.

Is the procedure safe?

Yes most definitely. It is state of the art technology.

How long will results last?

Like all surgical and cosmetic procedures, the effects of plasma treatments is not entirely permanent as it does not stop any further aging. But the positive results should last you years depending on the area treated. The positive effects of treatment will be noticeable immediately after the first treatment but can continue to improve for up to three months. Treatment can be repeated after eight weeks.

What can I expect?

There will be some tiny brown marks that have the appearance of minor scabbing, which are carbon crusts, but in 5-7 days these will flake away, revealing new pink skin beneath. Some swelling is expected (especially in cases of eyelid treatment) but it is likely to only last 3-5 days at most. You may experience a sensation similar to a sun burn which will likely last a few hours.
